Passion for Precision

GF Machining Solutions: all about you
When all you need is everything, it’s good to know that there is one company that you can count on to deliver complete solutions and services. From world-class Electrical Discharge Machines (EDM), Laser texturing and Additive Manufacturing through to first-class Milling and Spindles, Tooling, Automation and software systems — all backed by unrivaled customer service and support — we, through our AgieCharmilles, Microlution, Mikron Mill, Liechti, Step-Tec and System 3R technologies, help you raise your game and increase your competitive edge.

About GF Machining Solutions

Multi–technology solutions provider

Our commitment to you and your specific applications is proven by the value-adding intelligence, productivity and quality delivered by our multi-technology solutions. Your success is our chief motivator. That’s why we are continuously advancing our legendary technical expertise. Wherever you are, whatever your market segment and whatever the size of your operation, we have the complete solutions and the customer-centric commitment to accelerate your success—today.
Integrated manufacturing process

Whatever your industrial segment and whatever your application, we have a solution adapted to your specific needs. Backed by our multi-technology expertise and deep application knowledge across a wide range of market segments—from aerospace, automotive, and medical and dental, to information and communications technology (ICT) and electronic components—we can provide you with the perfect combination of technologies to optimize your process and exceed your expectations.

Technology portfolio

**Milling**
Increase your production capabilities and improve your productivity with our full range of Mikron Mill solutions. Designed and built for speed, accuracy and reliability, these machines—like you—are proven performers.

**EDM**
Get the quality and the precision you need for mold and die applications with our vast EDM portfolio, world renowned as the best in the business.

**Advanced Manufacturing**
Confidently explore new business opportunities with Laser texturing, Additive Manufacturing and Laser micromachining solutions. Simplify your processes and innovate to achieve new successes.

**Tooling and Automation**
We optimize your production to help you get the best of your manufacturing tools. System 3R’s integrated Tooling, Automation and software solutions increase your efficiency, quality and reliability.

**Customer Services**
Maximize the productivity and performance of your machine tools with original wear parts, certified consumables, preventive services to support your machine uptime, expert advice and solutions tailored just for you.
A new manufacturing era begins

Aligned with GF Machining Solutions’ vision of the smart factory of the future, our Laser texturing technology helps you overcome your daily manufacturing challenges while allowing you to innovate without compromise, speed up your time to market, and reduce your environmental impact.

Work digitally: Answer your manufacturing challenges
Digital transformation is underway and Laser texturing overcomes the limitations of manual and traditional methods to drive your surface texturing transformation. Defeat the daily challenges of difficult-to-realize designs and quality deviations, and tackle functional surfaces in order to seize new business opportunities. We understand your concerns: Our Laser texturing technology helps you keep pace in an ever-changing manufacturing world.

Innovate without compromise
Say goodbye to conventional manufacturing limitations with a solution developed to reduce your technical and economic constraints. Be ready to propose new product designs with fewer limitations, and innovate with confidence as a more efficient technology is now able to reduce the cost-per-part gap between existing technologies while delivering higher quality. Experience a technology that eliminates guesswork in executing your distinct designs—even on complex 3D surfaces—and achieve the expected optimal results.

Achieve faster time to market with less environmental impact
Time to market is key: You need to shorten your manufacturing chain while speeding it up in order to get your innovations to market faster. Laser texturing technology gives you access to the texturing operations essential to shortening your lead time by efficiently producing your textures internally.

Environmental sustainability is a major issue today and beyond, so governments are pushing chemical etchers to quickly adopt cleaner processes. GF Machining Solutions is committed to reducing its technologies’ environmental impact, as demonstrated by our Laser texturing technology’s cleaner, more efficient production of textured products. Laser texturing avoids the need for environment-polluting traditional methods that limit your design potential. Bet on a future technology right now.
Work digitally

1. Import your 3D model
   Work digitally: Import your 3D shape into the all-in-one software package to determine—with precision—the right position of the Laser operation that you would like to execute.

2. Develop new textures without limitations
   Work with gray scale textures without design limitations. Create original textures in-house and from natural surfaces by reverse engineering via 3D scanner. Let your textures express your imagination.

3. Precisely apply your textures
   Our software eliminates the guesswork, allowing our Laser products to recreate your distinct designs on large and complex surfaces, ensuring quality and precision. Manual tasks are then reduced to the minimum.

4. Machine your design in a single setup
   Catch additional market opportunities with a versatile solution: Realize engraving, marking and texturing operations, all with the same machine, thanks to the all-in-one software package. Your design is perfectly repeated.

Avoid chemical etching challenges
Today, manufacturers relying on conventional texturing methods like manual chemical etching face significant limitations with regard to design, including the high risk of errors, environmental challenges related to the use of acids, and difficulties in accurately texturing complex 3D shapes.
Our Laser solutions for you

GF Machining Solutions’ digital Laser texturing technology—fully digital, precise and ecologically sound—is already a proven solution for adding distinct textures to molds for car interiors, packaging, home appliances and ICT. Today, it is poised to transform the texturing of plastic injection molds and allow designers to innovate without limits thanks to our unique Laser texturing product portfolio answering your specific needs.

Performance line
The AgieCharmilles LASER P series, available since 2009, has become the market’s reference for Laser texturing. LASER P users enjoy the full range of Laser texturing advantages and the big plus of controlled costs. Be ready to seize new business opportunities with lucrative applications enabled by the AgieCharmilles LASER P series.

Sensation line
The AgieCharmilles LASER S series is a highly efficient, fully digital, all-in-one Laser texturing solution conceived to help you achieve the desired texturing quality without compromising your productivity. Use the full potential of GF Machining Solutions’ latest-generation Laser texturing innovation to stay ahead of your competitors.

Software
Our fully digital five-axis texturing and engraving process uses smart mapping solutions coupled with Smarpatch capabilities. As the most powerful software solutions package on the market, this all-in-one dedicated software suite enables Laser blasting, texturing and machining processes. Master your job from the preparation phase and graphic design all the way through to transition-free patching and UV mapping for applying texture and 3D simulation.

GF Machining Solutions Academy
Knowledge is key in manufacturing today, as topics, capabilities and training itself are changing. The academy facilitates the knowledge transfer that is key to customers exploiting the full capabilities of their Laser machines with “Learn to operate” modules such as LASER-Starter and LASER-Master and “Maximize performance” modules to exploit 100% of your machine’s capabilities and deliver the best results.

LASER S series

Execute your latest innovations at the speed of the manufacturing world

Improve your texturing performance to achieve unparalleled texturing productivity without compromising your quality. The new LASER S series was conceived as the new market reference in terms of quality output to help you meet new market demands. Quality is your target. That’s why the LASER S series offers extreme machining speed, allowing designers to execute their designs while controlling cost per part. A new technological era starts right here, right now.
The foundation of your success
Execute your latest innovations in texture design with quality and productivity thanks to the LASER S series’ robust mechanical structure and brushless motors. Machine with confidence that you will achieve perfect results from a solution based on our legacy as a technology pioneer.

Driving operator efficiency
GF Machining Solutions’ customer-centric approach is proven by the LASER S series’ LASER HMI, so your operator achieves best efficiency along with optimal comfort, productivity, ease of use and ability to focus on the task at hand. The control panel is adjustable to accommodate the operator’s height for greatest efficiency, and the ergonomic remote control is standard.

Keep an eye on your machining process
This solution’s large windows allow your operators to monitor the texturing operation with comfort and safety through protective Class 4 windows. Admire the full efficiency delivered by the LASER S series right now.

For your comfort and a clean environment
The AgieCharmilles LASER S series provides you with a clean working environment while increasing operator safety and comfort—all while helping you maximize your potential with an optimal dust extraction system.

rConnect brings smart manufacturing to your workshop
GF Machining Solutions’ rConnect digital services platform empowers you to increase your manufacturing productivity. Our latest modules are indispensable tools for your daily business. Count on a secure connection based on the latest technology—certified by TÜViT.
Revolutionary surface texturing

Push the texturing performance of the LASER S to 100% of its capabilities with our innovative Smartpatch and 3D Smartscan software elements. The software maximizes the LASER S series’ performance and helps you achieve extraordinary texturing results.
All-in-one solution
Laser blasting, structuring, engraving, machining, texturing and marking

Patented Smartpatch
Take your quality and machining time optimization to new levels.

Smartscan 3D
Count on Smartscan to optimize every patch you machine.
Preparing the digital file

Take your designs to a new level of innovation
Designers, can you imagine a technology that combines total design freedom and complete control of your texturing costs to help you get your ideas to market? That is the reality today with GF Machining Solutions’ AgieCharmilles LASER S series. It brings together all of the prerequisites to satisfy your vision of making your product a reality.

Fully digitized process with an all-in-one solution
GF Machining Solutions’ fully digital process for five-axis texturing and engraving uses smart mapping solutions coupled with Smartpatch capabilities—the most powerful Laser machining software solutions package on the market. This all-in-one dedicated software suite enables Laser blasting, texturing and machining processes to drive your success. It allows you to master your job from the preparation phase and graphic design all the way through to transition-free patching and UV mapping for applying texture and 3D simulation. Experience greater application flexibility and machining results aligned with your expectations with our complete toolbox ready to perfectly answer your specific application requirements.
Mapping

The 3D mapping of your texture is perfectly executed, taking into account the orientation and size of each element of your idea.

Texture bitmap

Design geometrical patterns up to 16-bit gray scale image with confidence that your idea will be respected.

Getting started with a digital file

Begin with the 3D model of your part to define the desired texture and execute a qualitative GF Machining Solutions Laser operation.
Smartpatch thinks for you
Each five-axis movement is calculated to most efficiently deliver the best shape of your texture while optimizing machining time—the result of a great combination: Smartpatch and the LASER S.

Perfect respect of your texture shape
By avoiding unnecessary machine movement, Smartpatch and the LASER S guarantee the best shape accuracy of your texture.
Smartpatch at its maximum capacity advances both quality and productivity

To date, even the most advanced Laser texturing solutions have forced manufacturers to make some sacrifices in terms of either quality or productivity. That’s because most existing laser texturing machines randomly apply textures to the workpiece surface, working from one area to the next to remove material in patches. Without a smart patching solution, productivity and quality are compromised due to inefficient texturing strategies and texturing errors induced by the movement of the laser head. Smartpatch boosts both quality and productivity for the market’s most challenging textures. Coupled with the AgieCharmilles LASER S hardware capabilities, performance is even further improved, so you experience the best five-axis Laser texturing solution on the market.

Driving your hardware with intelligence and efficiency
We drive the productivity of your hardware with intelligence and efficiency. Timing is always a key to reducing cost per part, and our AgieCharmilles LASER S series is optimized to deliver full efficiency for every patch machined, thanks to Smartscan, a new creation by GF Machining Solutions.
The multi-process solution to drive your success

In today’s fast-moving market, you never know what type of machining job you will confront tomorrow. That’s why it is becoming a must to have a machine that can be quickly adapted to your application, as well as easy access to two interchangeable Laser sources, and our Flexipulse capabilities to shape or mark your text or work on the surface—all on the same machine.

Laser texturing
Extend your design possibilities and quality compared to chemical etching processes while achieving faster time to market. The LASER S is up to 50% faster, depending on the application, at executing challenging geometrical textures. Experience a new era in Laser texturing.

Laser engraving and marking
Simplify complex manufacturing process to save time while achieving higher quality. LASER technology makes it easy for you to tackle complex jobs and helps you to increase surface quality while speeding up your operation.

Laser blasting and structuring
Higher flexibility, precision and ease of use compared to sandblasting boost quality and application possibilities while optimizing lead time. The LASER S now executes such operations up to 50% faster than was previously possible.
Laser texturing
40% machining time reduction with Smarpatch

Laser engraving
Surface finish reduced to Ra 1.0 µm

Laser 3D marking
Now 40% faster

Laser blasting
Now 50% faster

* Results compared to solutions without high-speed 3D scanning feature
Larger marking field
Reduce machine movements to boost your Laser operations' efficiency and quality.

Two nano Laser sources
Manufacturing agility is the challenge; the LASER S is the solution. Be ready to switch from one Laser to another to execute your specific daily jobs.

Flexipulse
Achieve higher quality: Fine-tune your tools and adapt your Laser parameters down to the finest detail.

High-speed scanning system
Reduce your machining time and increase your machining productivity with the faster 3D scanning enabled by the high-speed scanning system embedded in our unique Laser solution.
Unrivaled quality and productivity

Get the productivity, quality and product differentiation that are key to staying ahead in today’s market. Overcome your business challenges with GF Machining Solutions’ complete solution for finishing your mold inserts in a single setup. Limit the risk of human errors, boost your quality output while overcoming your time-to-market challenges, and open new design possibilities while reducing the need for additional machining processes. Save time and increase your quality.

* Picture made at GF Machining Solutions’ Geneva R&D center
Innovations at a controlled cost per parts

Increased thermostability
We understand your need for quality. Temperature variations are critical when a stable Laser operation is necessary. The new LASER S series’ Laser head—built to the highest standards—has thermostabilization to keep the Laser beam spot stable at the desired position throughout your machining operation. Discover the Laser solution that delivers perfect machining quality, even on molds requiring very long machining times.

Larger marking field
Satisfy quality demands in challenging markets like ICT and boost your productivity with our larger marking field. It reduces your machine movement to the minimum. The high-end lenses available with the LASER S series ramp your quality up even further. Your results: Textures are executed faster and at highest precision.

Two Lasers in one solution
You need flexible machining solutions. The LASER S series is the answer, giving you the agility to jump to the next business opportunity. Easily switch from one Laser head to the other to adapt your process to your specific application: Use a 30-watt Flexipulse for demanding high-quality applications and switch to a 50-watt or 100-watt Laser for efficient Laser machining. Advance your manufacturing agility with the solution that’s ready for tomorrow’s demands—today.

Flexipulse
Optimize the performance details of your Laser source. Our Flexipulse helps you fine-tune your Laser parameters down to the finest Laser source details and get the right quality-to-speed ratio for your application thanks to the unique flexibility offered.
High-end optics for the best output

Fused silica lenses are the best on the market, demonstrating that we have chosen the best to help you achieve the best Laser operation. Choose the specific lens best suited to your application.

Choose the lens you need

Our Laser solution allows you to select the specific lens needed to realize your particular application.

Accurate and fast positioning measurement

Our unique all-in-one Laser head guarantees high positioning accuracy and fast, accurate tool measurement. The HEIDENHAIN touch probe guarantees a perfect part setup with ±1 µm repeatability.

Accurate and fast positioning measurement

Our unique all-in-one Laser head guarantees high positioning accuracy and fast, accurate tool measurement. The HEIDENHAIN touch probe guarantees a perfect part setup with ±1 µm repeatability.

The HEIDENHAIN touch probe guarantees a perfect part setup with ±1 µm repeatability.
High-speed 3D scanning system

Reduce your machining time by up to 50%. With the faster 3D texturing enabled by the high-speed scanning system embedded in our unique Laser solution, you increase your machining productivity to shorten your lead time and reduce your machine return on investment (ROI). Be more efficient, be more clean and be right all the time, thanks to this highly efficient digital solution.

Achieve unique 3D performance
Optimized machining movement guarantees unequaled quality in the shortest time, thanks to our increased marking field, high-speed 3D scanning system, and unique-on-the-market smart programming tools.

Unprecedented efficiency
Execute 3D scanning operations and use the full efficiency of an optical axis compared to a mechanical axis to boost your productivity for the most complex parts. Our LASER S machine offers unique performance of 3D operations thanks to a high-speed 3D scanning system achieving up to 5,500 mm/s scanning speed without compromising your quality.

A unique combination to enable your success
Only GF Machining Solutions can offer you the market’s most efficient 3D machining strategies made possible by our unmatched combination of software and hardware.
Increased focal distance

5,500 mm/s
Fast scanning mode with FS255 mm

A generous working area

720°
Experience always shows that measures to reduce the idle times of your machines are significantly more worthwhile than chasing seconds in the actual machining process. The solution is a stable and exact reference system. This lets you preset away from the machine and then set up the machine with minimum idle time, quickly and precisely with GF Machining Solutions’ System 3R Tooling.

Productivity while keeping your flexibility
Flexibility, including solutions that can accommodate production changes to match your business and environment, is a key success factor in today’s marketplace. To make your machines more flexible in handling workpieces of various sizes, various chuck adapters are available for all of our Tooling systems.

Boost your competitiveness
Automation keeps production going whatever the time of day or day of the week. You achieve shorter lead times, higher productivity and quicker payback of capital invested in machines. With automated operations, production can continue running around the clock, seven days a week. The possibilities are endless.

One partner to optimize your productivity
We deliver a large range of Tooling to match your application and reduce unproductive times on your machine.
The partner of choice

GF Machining Solutions is the partner of choice to successful tool, mold and die makers in fast-growing market segments like electronic components, ICT and automotive, and to producers of high-value parts for aerospace and aeronautics, the automotive industry, and many other industrial areas.

Expertise in automotive applications

Trends in the automotive market indicate consumer demands for more personalization, including customization of car exteriors and interiors while geometrical textures in automotive interiors are more and more popular in this sector. Our Laser texturing machines help manufacturers to fulfill these demands, guaranteeing quality, repeatability, and continuity between parts. That’s the plus of working with the market reference in mold texturing.
Packaging
Productivity, quality, and product differentiation can put you ahead in today’s fast-moving global marketplace, especially in the packaging sector, where mold makers and designers are looking for new manufacturing and design possibilities. That’s why packaging manufacturers worldwide turn to GF Machining Solutions as their single-source expert partner and provider of success-triggering solutions.

Significantly simplify your operations
The AgieCharmilles LASER S series helps users to reduce their Laser machining operations by up to three times. The LASER S is a revolution for mold makers wishing to go break into the packaging sector.

ICT
Fulfill information and communications technology (ICT) industry needs, down the finest details, with GF Machining Solutions’ Laser technology. Profit from the technology that has been globally renowned brands’ Laser texturing reference for production of a wide range of end products, from mobile phones to laptops.

Perfect execution of large texturing operations
The AgieCharmilles LASER S series’ larger making field and 3D scan capabilities produce perfectly homogeneous textures at the requested quality and in a shorter time to reduce time to market—a proven fact.
Automotive lighting
Achieve perfect Laser blasting operations

The value of automotive lighting molds is high and the manufacturing process can be highly complex, involving several machining technologies and manual processes. Manual processes such as blasting and chemical etching present significant limitations with regard to surface design, the high risk of errors, environmental challenges due to the use of acids, and difficulties in accurately texturing complex 3D shapes.

Substitute your operations for higher value texturing
With GF Machining Solutions’ AgieCharmilles Laser texturing solutions, a mold can be textured more quickly in-house without masking, hand polishing or third parties. The technology’s versatility means you can play with the grain and meet new functional surface needs, measured with 3D parameters. Via our dedicated Laser Design software, the operator tells the machines the position of the grain, its density, and the organization of the Laser points to be applied to the workpiece surface. The result: many fewer programming hours.

With the LASER S and its large marking field and Smartscan 3D capabilities, homogeneity is perfect and it is executed in record time and with irreproachable surface quality.
Packaging closures

Experience optimal machining operations with a simplified process

Realize more complex shapes and control your operations to make your manufacturing process easier for your operator to manage—all with Laser technology right now.

Make your processes simple

Get the productivity, quality and product differentiation that are key to staying ahead in today’s market. Overcome your business challenges with GF Machining Solutions’ complete solution for finishing your mold inserts—such as the closure mold cavity—in a single setup, limiting the risk of human error and opening new design possibilities while reducing the need for additional machining processes. Laser texturing opens new business opportunities, saves you time, and increases your productivity.

Fine texturing for laptops and smartphones

Electronics consumers have high expectations for the aesthetics of their laptops and smartphones, and the market is increasingly demanding higher quality. These demands ramp up the pressure on you to produce very fine, perfect textures that are absolutely free of deviations from the original design. Moreover, new 5G smartphones are driving demand for plastic covers, putting your texturing performance to the most extreme tests. For example: engraved molds requiring just one movement of the Laser head. GF Machining Solutions’ LASER S meets all of these extreme demands and more to position you for success in this highly competitive sector.

New capability for fine textures
Boost your manufacturing efficiency

Focus your operators on the essential tasks

Etching processes require time-consuming preparation, such as mold protection, pattern copying, mask application, the manual etching itself and cleaning operations for each layer necessary to achieve your targeted texture depth. With our digital technology, all these tasks can be prepared in advance to optimize your lead time.

Easily master the process and counter the risk of staff turnover
Mold texturers are increasingly difficult to find due to waning interest in the crafts and high staff turnover. This is yet another market challenge. Prepare your operators for the digital future today while readying them to perfectly execute increasingly complex jobs—all while reducing your dependence on manual labor—with Laser technology.

Increase the number of automatic operations
Machine with confidence that you will keep your promises, with our increased automatic machine operations compared to manual operations. We make sure your production is done within the time you promised and with a limited risk of errors.

Customer Services solutions

The continuing availability of your AgieCharmilles LASER S machine, your productivity, and your continuous improvement—such as operator knowledge, machine upgrades or preventive maintenance—are essential to keeping your business successful.

Academy

Our expertise at your service
The GF Machining Solutions Academy has the remarkable, human-centric mission of managing the knowledge transfer from Research and Development, Customer Services and sales and application support all the way through to our innovative training.

Knowledge is key in manufacturing today, as topics, capabilities and training itself are changing. The academy facilitates the knowledge transfer that is key to exploiting the full capabilities of your GF Machining Solutions Electrical Discharge Machining (EDM), Milling and Laser machines as well as Automation. You benefit from more than 1,000 years of accumulated expertise across five technologies—at your service.

Training is a must
From basics to performance, we propose first “Learn to operate” modules that aim to take your operator to the appropriate skill level for becoming certified and up to speed on the safe use of your AgieCharmilles LASER machine. Upon completion of the “Learn to operate” module, you’re ready for the “Maximize performance” training modules that increase your knowledge by focusing on more complex parts, design and surface functionalities.

Dedicated to your operator, our two-course “LASER-Startet” and “LASER-Master” modules are your manufacturing must-have for starting and efficiently using your AgieCharmilles LASER machine. They deliver measurable added value for your operator—and your business—and lay the foundation for exploiting 100% of your machine’s capabilities.

To learn more about GF Machining Solutions Academy training opportunities, please visit www.georgfischer.com/academy.

Manage the full lifetime of your Laser machine

Enhance your productivity
Count on our services to answer your specific needs and help you take your operation to the next level of success.

Operate your equipment in perfect condition and optimize your uptime
Regular maintenance is the first step to ensuring the full productivity potential of your GF Machining Solutions Laser solution. During each visit, armed with detailed checklists, we use state-of-the-art measurement tools to painstakingly inspect wear parts and adjust your machines.
New digital service possibilities

GF Machining Solutions Customer Services continues to push technological boundaries to deliver the future of services to you—today.

**rConnect** is the digital services platform available for all GF Machining Solutions technologies. Following a modular approach, rConnect comprises a range of services that empower you to increase your manufacturing productivity.

Certified with the TÜViT Trusted Product Certificate.

**rConnect Live Remote Assistance (LRA)**, our expert engineers rapidly respond to your service requests. LRA allows effective face-to-face assistance using audio, video, chat and many more functionalities.

**rConnect Messenger**, we deliver machine data to your mobile device to keep you constantly informed about your production. You can supervise your workshop from your smartphone.

GF Machining Solutions

EDM (electrical discharge machining)
AgieCharmilles wire-cutting, die-sinking and hole-drilling machines
For over 60 years we have been at the forefront of every EDM development: designing and refining the EDM process and building machines that deliver peerless part accuracies, surface finishes, cutting speeds and process reliability. Today, our AgieCharmilles wire-cutting, die-sinking and hole-drilling machines are recognized throughout the world as the best in the business. Our continuous research and development in digital generator technology, control systems and integrated Automation systems are evidence of our commitment to keeping your EDM operations on the leading edge of technology.

Milling
Mikron MILL S (high-speed Milling), Mikron MILL P (high-performance Milling) and Mikron MILL E (high-efficiency Milling)
Customers operating in the mold, tool and die and precision component manufacturing sectors stake their reputations on being able to quickly and cost-competitively meet their customers’ demands. That’s why they invest in GF Mikron machines. Incorporating the latest and most advanced technologies and premium-performance components, Mikron MILL S, Mikron MILL P and Mikron MILL E machines help you increase your production capabilities and improve your productivity. Designed and built for speed, accuracy and reliability, the machines, like you, are proven performers.

Liechti dedicated aerospace and energy machining centers
Aerospace and power generation turbine manufacturers increasingly turn to Liechti dedicated five- and six-axis machining centers to machine complex, high-precision airfoils on blades, disks, blings, blisks/IBRs and impellers. It’s easy to see why because these machines, with their specific profile machining technology, specialized CAD/CAM software and engineering competence for ultra-dynamic machining in titanium, Inconel, nimonic, titanium-aluminide and high-alloy steels, yield productivity gains as much as 30 percent, thanks to reduced machining times. In the globally competitive aerospace and power generation manufacturing sector, that’s definitely worth shouting about.

Step-Tec Spindles
At the heart of every GF Mikron machining center is high-performance Step-Tec Spindle. Step-Tec Spindles are essential core components of our machining centers. Highly accurate and thermally stable Step-Tec Spindles ensure that our machines can handle everything from heavy-duty roughing to fine-finishing operations.

Laser
AgieCharmilles Laser texturing machines
Laser texturing is a fully-digitized surface engineering process that has huge potential. The technology enables precise 2D and 3D textures or engravings to be machined accurately and directly onto complex parts or molds to improve and alter their aesthetic appeal, functionality and performance. The process is infinitely repeatable and offers many distinct environmental and economic advantages over conventional texturing processes.

Laser Additive Manufacturing (AM)
GF Machining Solutions and 3D Systems, a leading global provider of additive manufacturing solutions and the pioneer of 3D printing, have partnered to introduce new metal 3D printing solutions that enable manufacturers to more efficiently produce complex metal parts.

Tooling and Automation
System 3R Tooling, Automation and software
Productivity is the key to manufacturing success, and automating a manufacturing process is a proven method of increasing its efficiency, effectiveness, quality and reliability. System 3R’s integrated Tooling, Automation and software solutions ranging from simple workpiece pallet and electrode changers through to flexible manufacturing and robot handling systems are guaranteed to help you increase their competitive advantage.

Customer Services
Operations Support, Machine Support and Business Support
To help you get the most and the best from your machine tools and equipment, we offer three levels of support. Operations Support covers our range of original wear parts and certified consumables (EDM wires, filters, resins, electrodes etc.) to ensure that your machines are performing at the highest levels. Machine Support maximizes, through our best-in-class technical support, preventive services and quality spare parts, your machine tool uptime. Business Support is designed to help you make a real step-change in your productivity and performance with solutions tailored to your specific needs.
At a glance

We enable our customers to run their businesses efficiently and effectively by offering innovative Milling, EDM, Laser, Additive Manufacturing, Spindle, Tooling and Automation solutions. A comprehensive package of Customer Services completes our proposition.
