CUT 2000 X
CUT 2000 X OilTech
CUT 3000 X
Linking accuracy with productivity

**CUT 2000 X / 2000 X OilTech**

**CUT 3000 X**

The highly accurate CUT 2000 X, CUT 2000 X OilTech and CUT 3000 X take wire-cutting EDM to the extreme, thanks to expert and dedicated machine testing on our production site.

---

**Increase your flexibility**

**with two wire spools on one machine**

Exclusive Automatic Wire Changer (AWC) two-wire spool allows you to use larger diameter wire or premium wires for the main cut and then automatically switch to smaller wire for the finishing cut. Two 25 kg wire spools are possible, so no modification of the wire circuit is needed when switching wires.

---

**Deliver uncompromising precision parts**

Our correction of the CNC guarantees you perfect pitch and positioning accuracy from the very first die or mold you machine. The result: No compromises in your quest to consistently achieve ±1.5 µm pitch accuracy over 350 x 250 mm (500 x 350 mm for CUT 3000 X size).

---

**Oil machining for ultimate results**

Oil dielectric eliminates all risk of depletion or corrosion. It enables long run machining when parts need to be submerged a long period of time. Achieve the tiniest slot widths and radii due to the smaller gap between wire and workpiece enabled by oil dielectric, compared to water and comparable wire diameter.
Get perfect results while reducing part setup and operator presence

The Integrated Vision Unit (IVU Advance), with an embedded charge-coupled device (CCD) camera linked to a backlight installed on the lower arm of the machine allows pre-setting, offers in-process local measurements and scanning of the machined contour. This ensures 100 percent quality results.

Provide a complete wire breakage protection

Spark Track* technology monitors the distribution of sparks along the wire during roughing. ISPS is using this spark distribution information from Spark Track to protect the wire in real time.
