

## Save time and increase precision for repeatable parts with Macro programming

## Maximize performance training

# EDM- Die-sinking Macro programming 2

article n°200010607 (at GF site)

article n°200010608 (at customer site)

Duration	Number of participants	Experience level	Requirements	Machines
2 days	4	Intermediate	EDM-Die Sinking Basic Training	DRILL 20, FORM , FORM E, FORM P, FORM S, FORM X

### What are the course contents?

- + Creation of an automatic complex measurement cycle such as a punch
- + Automation of geometric correction directly in machining program

### What is the course objective?

- + In this course, participants learn how to write an advanced measurement program and how to automate geometric correction of cavities.

### What are the course benefits?

- + Gain time and secure your measurement processes in repetitive tasks. Benefit from practical application of skills acquired in simulations.
