GPS 240

... reduces setting-up times.
... ensures precision and quality.
... is sealed against dirt and swarf.
... has lightweight pallets.
... suitable for automatic changing with System 3R’s automation program.

The machining zero point is defined by the centre of the chuck in the GPS 240 system. The chuck can be mounted on the machine table of any machine tool.

The standardised hole pattern of the pallet allows the fixation of workpieces, fixtures and accessories such as vices, three-jaw chucks and magnetic tables from below. This gives collision-free mounting, even with five-sided machining.

The economical, pressure-die-cast aluminium pallets are very light, making them also suitable for manual handling. Naturally the GPS 240 is also suitable for automatic changing.

The chuck seal prevents dirt penetrating between the chuck and the pallet. This simplifies maintenance and lengthens the life of the components. A lifting mechanism which operates on locking/opening protects the references when loading heavy workpieces.

+ Repetition accuracy – within 0.002 mm
+ Indexing accuracy – within 0.005 mm
+ Locking force – 30 000 N [with force boost 60 000 N]
+ Fixed index positions – 4x90°
+ Required air pressure, pneumatic chuck – 6 bar
+ Recommended max workpiece weight – 150 kg.
The Z-references are air-blast cleaned, through nozzles in the Z-references of the chuck.

A lifting mechanism which operates on clamping/releasing protects the references when loading heavy workpieces.

Spring loaded clamping mechanism. Releasing by air.

Seal for a completely sealed chuck-pallet interface against dirt and swarf.

Hardened chuck body with prisms for X/Y centring made out of one piece for maximum stability. Indexing 4 x 90°.
