Three steps to success

The route to rational production in wire EDM machines can be summarised in three steps – Mounting, Reference system and Automation.

1. Mounting
First of all, the workpiece needs to be positioned and secured in the working area of the machine, preferably on the zero line, and with the risk of collision with the machine’s wire guides reduced to a minimum. And so firmly that it can handle the high flushing pressures of modern machines.

2. Reference system
Once the problem of effective mounting of the workpiece in the machine has been solved, the next step is to minimise downtimes when retooling the machine. Technical developments of the machines in recent years have resulted in significantly higher material removal rates. But you won’t benefit from this potential if the machine is idle for lengthy, troublesome retooling. So the aim must be to minimise retooling times with the machine idle. With a reference system you can prepare and preset the workpiece away from the machine, then lift it in and secure it in the machine – quickly and precisely – with minimised downtime and consequent better utilisation of machine capacity.

3. Automation
With a reference system and a pneumatic chuck on the machine table, you have laid a firm foundation for the crucial step towards maximised machine utilisation – automation. Add a pallet changer to your machine and you have created an automated production cell. A cell that can generate revenue 24 hours a day, weekdays and weekends, all year round!
Basic equipment – WEDM

WEDM positions the workpiece within the working area of the machine and on the machine’s zero line. Whether the workpiece is rectangular or round, small or large, thin or thick, tall or short, it is clamped with minimal risk of collision. There are infinitely many possible combinations in the product range, the only limitation being the user’s imagination.

Without doubt, System 3R offers the most comprehensive product range on the market. What’s more, it also leads in terms of number of installations – world wide.

- Exceptional flexibility
- Accurately ground-in references
- Repeatable accuracy
- Double-sided parallel references
- Fits all machine tables with 25 or 50 mm pitch.

Basic equipment – Macro

With a Macro chuck as basic equipment on the machine table, you can interconnect all your machines to create a single system. Move the workpiece from the wire EDM machine to the grinding machine or the die-sinking machine without subsequent alignment – quickly and precisely.

If you choose a pneumatic Macro chuck, you can operate round-the-clock production if you wish.

+ Allows fully automated production
+ Links all your machines together
+ Z-references with automatic air-blast cleaning
+ X and Y references of cemented carbide
+ Repetition accuracy:
  - Macro 0.002 mm
  - MacroNano 0.001 mm
+ Turbo locking – enhanced clamping force.

**Note:** The pneumatic chucks require an air pressure of 6±1 bar.

Mounting heads

Rapid setup is essential if you want to benefit from the material removal capacity and the accuracy offered by modern machines. However, faster machines with increased flushing pressure cause resonance and vibration. So in order to fully utilise the capability of the machines it is necessary to have stable tools and workpiece mountings.

+ Setup done in seconds
+ Gives maximum workpiece precision
+ Utilises the machine capacity
+ More stable than any other system
+ Minimal vibration
+ Minimises resonance

Pre-set in three axes

Pre-set in three axes with System 3R’s levelling adapter. This can be done with an accuracy of thousandths of a millimetre.

The simple, directly measurable references of the levelling adapter mean that presetting can be done on an ordinary surface plate, using one of System 3R’s presetting stones.

Preset away from the machine. Lift the preset “package” into place – levelling adapter, holder and workpiece – fix with a few simple manual operations and start the machine.

Simple, quick and precise.

Supervise solves setting-up problems for the most frequently occurring sizes of workpiece – small to medium-sized.

The high repetition accuracy not only allows presetting and fast setup; it also provides a solid foundation for rational series production. The springback is minimal and resonance damping is significant. Add this together and you have a very firm grip on production. Supervise delivers more than others dare to promise.

+ The low profile gives clearance from the upper and lower wire guides
+ High clamping force.

The unique, patented asymmetric design of the locking jaws gives extremely high locking force and enhances the contact between the workpiece and the reference surface at the same time.

The 3Ruler ruler system
The 3Ruler ruler system has been developed for clamping medium-sized and large workpieces in machines with a parallel or U-shaped machine table, as well as for machines with a frame table. The rulers, which have built-in height adjustment, are used singly or in pairs.

With the aid of 3Ruler, rectangular or round workpieces, lightweight or heavy, large or small, are located on the machine zero line, without risk of collision. A comprehensive range of accessories gives an unsurpassed range of applications.

- Machine-adapted ruler lengths
- Repeatable accuracy with the aid of reference elements
- Stable mounting of large workpieces
- A broad range of accessories gives great flexibility

### 3Ruler, 3R-239-XXX

Presetting & inspection

Make efficient use of machine time.

Machine can be used either for active machining or for non-productive setting-up operations on an idle machine.

You can optimise machine capacity by presetting away from the machine in a presetting station, while the machine is actively working on another workpiece. So – preset away from the machine, lift in the preset package, secure it with a few simple manual operations, press the start button and the wire EDM machine is working again – One Minute Set-up.

System 3R’s presetting stations are constructed on a modular system, where the customer chooses a suitable packet of prepared “measuring stones”, for which the customer chooses the necessary chuck/reference elements in order to match the installation on the wire EDM machine table, as well as a pneumatic control unit if required.
**Presetting & inspection**

**Automation**

**Utilise every hour of the day and night!**
An automatic production cell can generate revenue round the clock, seven days a week. Why be satisfied with 40 productive machine-hours a week when the same machine can achieve over 100 additional hours a week? Use every hour of the day and night for production!

WorkPal 1, WorkPartner 1+ & Fanuc - three "aces" which boost your productivity and sharpen your competitiveness.

And not least – they bring faster payback on the investments you made.

---

**Automation**

**WorkPartner 1+ – can serve two machines**
